

1. Overview & Definitions

Skin diseases in dogs and cats can affect their paws alone or as part of a broader skin condition. Symptoms include itching or pain, causing licking, chewing, or lameness.

(ممکن تصیب الأقدام بس، أو تكون جزء من مشكلة جلدية أكبر)

key points:

- ◆ **Conditions:** Paw-specific skin diseases or part of widespread skin disorders.
- ◆ **Causes:** Multiple potential aetiologies.
- ◆ **Diagnosis:** Assessing lesion type and paw areas affected is critical.
- ◆ **Symptoms:** Itching and/or pain, resulting in licking, chewing, or lameness
